

## Authorize every action. Prove every outcome.

The **governed execution layer** for **Identity, Applications** and **AI agents**  
— one fabric, three control surfaces, every action receipted.

### 01 · IDENTITY

Unify identities across every system

### 02 · AI AGENTS

Execute safely with proof

### 03 · APPLICATIONS

Connect and control every target

● WHAT EMPOWERNOW IS

The next-generation identity governance platform from EmpowerID — built on twenty years of enterprise IAM, now extended to govern human identities, applications and AI agents on a single fabric.

● THE BOARD QUESTION YOU CAN'T ANSWER

Your team cannot answer who has access to what without pulling data from multiple disconnected systems. When auditors ask, you need **one answer** — not **six**.

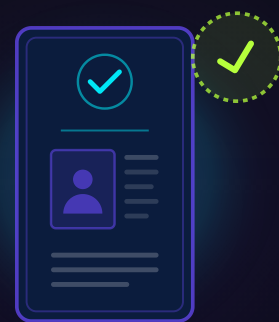

● TODAY

Many cards. No truth.

● WITH EMPOWERNOW

One passport. Every system.

● OUR ANSWER **Unify identities across every system**

**Identity Fabric**

One data model across IGA, PAM and AM. The same person, resolved everywhere.

**Lifecycle**

HR triggers access from day one. Removed within minutes of departure.

**Governance**

Continuous certifications, automated SoD, audit-grade evidence on demand.

CUSTOMER OUTCOME

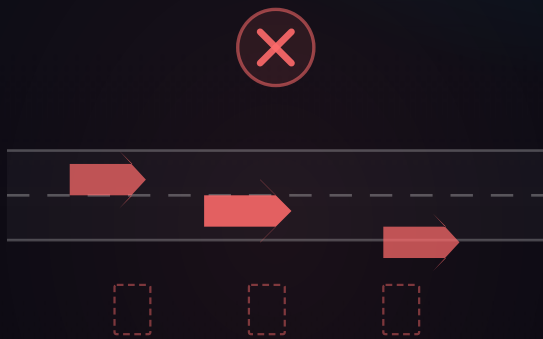

Access revoked within **15 minutes** of departure across **30+ systems** simultaneously.

*Global financial services customer · EmpowerID*

THE CONVERSATION YOU'RE NOT HAVING YET

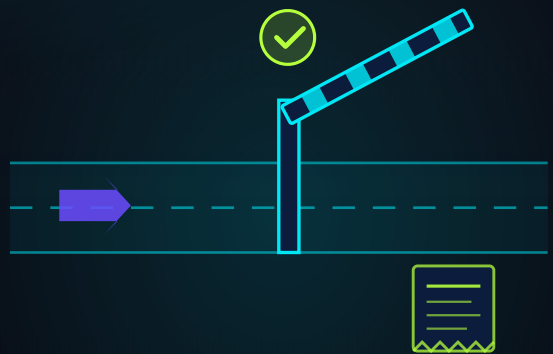

Your AI tools are already making decisions. No one authorised them. When something goes wrong, you need a record — not a gap.

TODAY

Open road. No record.

WITH EMPOWERNOW

Every call, receipted.

OUR ANSWER **Execute safely with proof**

**Create tools once**

Existing APIs become governed MCP tools. One definition, every agent, every framework.

**Enforce everywhere**

Bind agents to users. Budgets and egress limits enforced at the edge.

**Prove every action**

Signed, receipted, audit-ready from day one. No custom pipeline required.

CUSTOMER OUTCOME

**Every agent action authorised, receipted and audit-ready from day one — no custom audit pipeline required.**

THE DEADLINE ALREADY ON YOUR ROADMAP

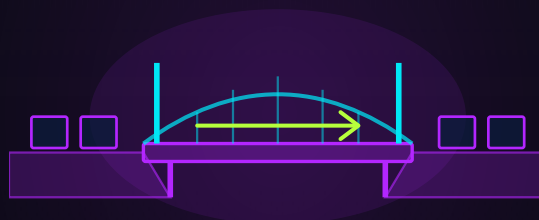

Your SAP IdM goes end-of-life in 2027. Your migration window is already closing — and the average migration takes **18 months**.

TODAY

Cracking. Closing.

WITH EMPOWERNOW

Same banks. New bridge.

OUR ANSWER **Connect and control every target**

**Native depth**

200+ bidirectional, event-driven connectors. Not screen-scraping. Not nightly batch.

**SAP landing zone**

VDS bridges SAP GRC and legacy IAM with full coverage and no source changes.

**Workflow orchestration**

Low-code designer, hundreds of pre-built activities, real-time and batch.

CUSTOMER OUTCOME

**320+ SAP environments** governed on one platform — without disrupting a single downstream system.

TWO WAYS TO GO FURTHER

# See EmpowerNow in your environment.

Whether you're ready for a working session or still building the internal case, pick the path that matches where you are today.

● PRIMARY · TALK TO ARCHITECTS

## Book a 30-minute architecture review

Bring one identity source, one target system and one agent platform. We'll show **Identity**, **Applications** and **AI agents** end-to-end — with a working receipt to match.

~30 min · live system

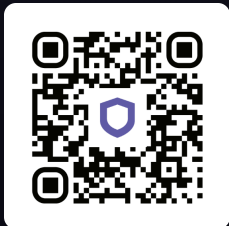

● SECONDARY · READ ON YOUR OWN

## Download the SAP IdM Migration Guide

A self-paced reference for teams planning the path off SAP IdM by 2027 — covering coexistence, VDS bridges, role mining and the customer playbooks that worked.
